

## 2014 ANNUAL OPERATING INSTRUCTIONS

### Glenwood Ranger District Gila National Forest

Deep Creek Allotment #426  
Whiterocks Allotment #401

**Prepared By:**

\_\_\_\_\_  
District Range Staff

**Date:** \_\_\_\_\_

**Approved By:**

DEBBIE C CRESS /s/  
District Ranger

**Date:** ---12/17/13---

## Annual Operating Instructions

### I. INTRODUCTION

These Annual Operating Instructions document your discussion with Kendall Brown and Allen Graves on December 17, 2013 at the Glenwood Ranger District Office.

Term Permitted Livestock Numbers:

Permittee	Number & Class of livestock	Dates
Alan Tackman	205 Cow/Calf	03/01 – 02/28
Alan Tackman	8 Horses	03/01 – 02/28

Authorized Use:

Permittee	Number & Class of livestock	Dates
Alan Tackman	205 Cow/Calf	03/01 – 02/28
Alan Tackman	8 Horses	03/01 – 02/28

Pasture Rotations:

Class of Livestock	Rotation Date	Allotment	Pasture
Cow/Calf	03/01 – 05/15	Deep Creek	Round Mountain/Lost Lake
Cow/Calf	05/16 – 10/20	Deep Creek	Bearwallow/Lost Lake
Cow/Calf	10/21 – 02/28	Deep Creek	Lost Lake/Round Mountain
Cow/Calf	09/01 – 02/28	Deep Creek	Mesa Holding (hospital & Holding)
Cow/Calf	03/01 – 02/28 *	Whiterocks	Upper/Middle (up to 50 head) Lower – use if water available

\* Whiterocks Allotment will be used as needed to address wolf/livestock interactions and water availability problems. Livestock can remain in the pasture until allowable use is reached (40%). Use will not exceed 544 AUMs.

The above schedule for stocking the Whiterocks and Deep Creek allotments is to address wolf/livestock interactions on the Deep Creek Allotment. The above schedule also depends upon the availability of forage and water. Some flexibility in the above pasture rotation dates will be allowed for justifiable causes such as weather conditions, livestock management needs, wolf/livestock interactions and range conditions. If there is a need to deviate from the above pasture rotation schedule by more than 15 days, you must notify the District Ranger of the proposed change in the pasture rotation date and the reason for the change. A deviation from the above schedule of more than 15 days must be approved by the District Ranger verbally or in writing. The District Ranger must be notified 5 days prior to the time livestock enter or leave the Forest if the placing on or removal of livestock is not planned in the above schedule, and more than 10 head are being moved.

### II. MANAGEMENT OF LIVESTOCK

You are responsible for monitoring water availability and forage utilization. It is your responsibility to move your livestock when sufficient water is no longer available or when

proper forage utilization is achieved in a pasture. You are responsible for keeping track of and maintaining control of your livestock. In the event your livestock are found to be out of the scheduled pasture, you will be required to find, gather, and return your animals to the proper pasture as soon as possible.

### **III. IMPROVEMENT MAINTENANCE**

All range improvements assigned in the 10-year Term Grazing Permit are to be maintained in a functioning condition. In the event these improvements cannot be brought up to a functioning condition, you should notify the Range Staff at the Glenwood Ranger District to schedule them for reconstruction as funds become available.

Contracts that were prepared and let in spring 2013 to replace fences destroyed during the Whitewater-Baldy Fire of 2012 are still on-going. Until the contractors replace the fences, you are to maintain them to the extent that they will control cattle within your allotment.

We have determined that allotment boundary fences between Deep Creek Allotment and Reserve District is in repairable condition. You will maintain your portion and Glenwood FS personnel will get with Reserve FS personnel to ensure that the other permittee's maintenance will be done. These fences will be in functional condition by May 15 of each year (unless snow/weather prevents access).

Gooseberry cross fence was not completed. Materials were returned to the Ranger District. If this fence is completed, there is a need to reconstruct fence #4210, the portion between the end of the Gooseberry fence to where fence #3031 junctions (partially burned in Whitewater/Baldy Fire and partially washed out in floods). Once this reconstruction is completed, Alan agrees that he will maintain/repair this fence(s). Alan will also roll up and remove the old fence #4233 and #4210 (downstream of Gooseberry Fence) and may keep any materials that are usable.

You are required to maintain all exterior boundary and interior fences and all water developments for the duration of your use of Whiterocks Allotment.

The Forest Service may have a water right to apply to Indian Hill well. We will investigate opportunities to move the well location to a more productive area. Once we have reliable water in this area, we will work together to design additional pipelines to water the Lower Pasture.

You indicated that you had no need for the Hogan Spring Cabin, and that it is mouse and snake infested and should be destroyed.

### **V. GENERAL INSTRUCTIONS**

1. Fire: Branding and warming fires should be used with good judgment - not on windy days or during times when fires are specifically restricted. The Glenwood District may allow naturally ignited fires to burn on the district this coming year. We will notify you if we plan to let a fire burn on your allotment.

2. Records: In order to close out permit modifications you must provide documentation of materials and labor constituting your contribution to the permit modification.

You must provide documentation of cattle numbers; dates of entering and leaving pastures, shipping dates and cattle losses (grown stock and calves). This information is used to substantiate the carrying capacity of the allotment. The information demonstrates use and the

need for forage to meet the economic needs of the county. This information may also be used to establish cause and effect if there is a significant change in calf crop (Example, a wolf pack becomes established near your allotment).

3. Heavy Equipment Use: Please notify district well in advance of any plans to use heavy equipment so that necessary clearances and/or permits can be obtained. You will be notified by the district when you can proceed.

4. Credit/Refund: Any credit or refund applications for grazing fees must be made as far in advance as possible. Credit/Refund applications are not retroactive and will be approved only if the District Ranger is notified of livestock removal, prior to, or at the time, the livestock are taken off the allotment. **You will be required to provide your Social Security or Tax ID number in order for a refund to be processed.**

A \$25 administrative fee will be charged for any additional bills for collection that are sent to you due to either late payment or for split billing on seasonal allotments. This fee will be collected to pay for the cost associated with issuing an additional bill for collection. There is no administrative fee for the normal "split billing" on yearlong allotments.

It is necessary for you to write the bill number on your check prior to submitting it to the lockbox. This is necessary to insure that your payment is credited to your account.

5. Short Age Calf Policy: Any short-aged calves (calves less than 6 months old on December 31) must be removed from the National Forest by April 1, or you will need to apply for and pay grazing fees for these animals from April 1 to the time they are removed from the National Forest. Calves that are 6 months old or older on December 31 need to be paid for starting January 1.

6. Salting and Supplemental Feeding:

- a. Feeding of energy supplements on National Forest land will not be permitted unless a proven need to use the supplements is shown, and a detailed plan is developed and approved.
- b. Feeding of hay on National Forest land will not be permitted unless a proven need to use the supplement is shown, and a detailed plan is developed and approved. All supplemental hay must be **certified weed free hay** and you must provide the proper documentation.
- c. Feeding of vitamin or mineral supplements, protein blocks or molasses licks on National Forest land is permitted when used in the same manner as salt.
- d. Salting practices will be in agreement with the 10-Year Term Grazing Permit. Salt will be placed in areas of available feed to help draw cattle to them. Salt will not be placed within ¼ mile from water and/or in natural concentrations areas which receive heavy grazing use.

## **V. ALLOTMENT STATUS**

The Allotment Management Plan for this allotment may need some updates to meet Forest Plan standards and guidelines. At the present time, direction for management on this allotment will be documented in these Annual Operating Instructions.

## **VI. OTHER ITEMS DISCUSSED**

You are authorized to use the Bearwallow pasture this year. We believe that the fences, with appropriate maintenance, will be sufficient to control cattle within the Deep Creek Allotment. The areas seeded in the Bearwallow pasture will be monitored in summer/early fall. We anticipate that there will be little to no use in these areas. If we find more than incidental use by cattle in the seeded areas, AOI changes may become necessary.

You indicated that you are in favor of Fire Use on your allotment as long as there is another allotment to move your cattle to. Your concerns will be considered when deciding to place a fire into the Fire Use category. The District Ranger will authorize necessary changes to this AOI to accommodate fire management.

Permittee used orange ear-tags in the right ear. It is estimated that ~75% of the herd is tagged. Permittee will strive to achieve 100% of the herd ear-tagged this year. The Shellhorns on the Copper Creek allotment will be tagging with purple tags. This tagging will help us identify cattle straying between adjacent allotments (Deep Creek, Copper Creek, T-Bar, Negrito-Yeguas, and Devil's Park Allotments).

## **VII. SPECIAL MANAGEMENT CONCERNS**

If the Dark Canyon (or other) wolf pack dens on or near the allotment and affects the planned rotation, pasture scheduling will be adjusted to separate your cattle as much as possible from the denning area. Use of the Whiterocks Allotment is authorized for the purpose of relieving pressure on your operation from the wolf depredations. I appreciate your cooperation in making these adjustments to further the wolf recovery program.

## **VIII. UTILIZATION MONITORING OF KEY AREAS**

Monitoring schedule

Pasture	Monitoring Date	Allowable Use	Key Area
Mesa Holding	08/30	Conservative (31 – 40%)	P2
Round Mountain	08/30	Conservative (31 – 40%)	C4
Lost Lake	09/15	Conservative (31 – 40%)	T1, T5
Upper/Middle/Lower	09/20	Conservative (31 – 40%)	P2, C2, C3

Monitoring of herbaceous forage will be conducted by ocular estimate of use within a pasture (utilization mapping). Verification of ocular estimates will be conducted using common methodology such as weigh/clip, grazed plant numbers, or stubble height. Grazing use will be described and mapped in the following utilization categories.

Qualitative Grazing Intensity Category	Use of Forage by Weight	Qualitative Indicators of Grazing Intensity
Light to no-use	< 30%	Only choice plants and areas show use: there is no use of poor forage plants.
Conservative	31-40%	Choice forage plants have abundant seed stalks: Areas more than a mile from water show little use: About on third to one half of primary forage plants show grazing on key areas.
Moderate	41-50%	Most of accessible range shows use: Key areas show patch appearance with one half to two thirds of primary forage plants showing use: Grazing is noticeable in zone 1-1.5 miles from water.
Heavy	51-60%	Nearly all primary forage plants show grazing on key areas: Palatable shrubs show hedging: Key areas show a lack of seed stalks: Grazing is noticeable in areas over 1.5 miles from water.
Severe	61 +%	Key areas show a clipped or mowed appearance (no stubble height): Shrubs are severely hedged: There is evidence of livestock trailing to forage: Areas over 1.5 miles from water lack stubble height.
Holechek, J.L. and D. Galt. 2000. Grazing Intensity Guidelines. Rangelands 22(3), pg 11-14.		

f the utilization guideline for the pasture is exceeded on 30% or more of the pasture in any year, livestock will be immediately removed from the pasture. Within a pasture, areas found to exceed allowable use will become key areas for monitoring the following year. The AOI for the next year will be adjusted to correct livestock management practices (distribution, number, timing, salt and water availability, etc.) that may have led to the overuse.

In the event that 30 percent or more of the pasture exceeds the set allowable use in a grazing year, that area will be required to be less than or equal to allowable use the next year. If that same area, or a substantial portion of the same area, exceeds allowable use in two consecutive grazing years, the entire pasture will be rested for one calendar year and stocking will be adjusted to balance with forage supplies. If the same area of a pasture exceeds allowable use in two years out of five, the stocking rate and management plan will be adjusted to balance with forage supply.

Monitoring of utilization for woody riparian species will be conducted on a reach basis in identified riparian areas (see table below).

Pasture	Reach Description	Management	Allowable Use
Bearwallow	Deep Creek within the Bearwallow pasture.	Accessible to livestock when pasture is grazed.	Conservative (31-50%) on herbaceous and not to exceed 25% woody riparian heavily hedged.
Round Mountain	Deep Creek within the Round Mountain pasture.	Accessible to livestock when pasture is grazed.	Conservative (31-50%) on herbaceous and not to exceed 25% woody riparian heavily hedged.
Round Mountain	Devils Creek within the Round Mountain pasture.	Accessible to livestock when pasture is grazed.	Conservative (31-50%) on herbaceous and not to exceed 25% woody riparian heavily hedged.
Lower Pasture of Whiterocks Allotment	San Francisco River	No cattle are permitted within the San Francisco River riparian area.	0% use.

If allowable use is exceeded on 30% or more of the riparian reach within the pasture, livestock

will be removed from the pasture. If that same reach (or a substantial portion of the same reach) exceeds allowable use in two consecutive grazing years, the entire pasture will be rested for one calendar year and stocking will be adjusted to prevent overuse of the riparian reach. If the same reach of a pasture exceeds allowable use in two years out of five, the stocking rate and management plan will be adjusted to prevent overuse of the riparian reach.

If unforeseen operational conditions require a change in the management specified in this AOI please contact rangeland management personnel at the Glenwood Ranger District to obtain approval of change(s). Advanced notice of change is requested so that field inspections can be conducted. Verbal approval of changes will be followed with a letter documenting the change. Failure to follow the instructions provided in this AOI, or other instructions (verbal or written) of a Forest Officer may lead to adverse action against your Term Grazing Permit (Part 1, Section 3 of your Term Grazing Permit).
